

SOLID Principles

- **S (SRP):** Booking handles booking information, PriceCalculator handles price calculation, and TicketPrinter handles ticket printing. Each class has one main responsibility.
- **O (OCP):** New payment methods such as NetBanking can be added as a new Payment subclass without modifying BookingService.
- **L (LSP):** UpiPayment, CardPayment, and CashPayment can be used wherever the abstract Payment is expected because each implements pay(amount).
- **I (ISP):** Payment contains only the common payment operation pay(amount), so payment classes are not forced to implement unrelated methods.
- **D (DIP):** Booking depends on the abstract Payment type rather than directly depending on UpiPayment, CardPayment, or CashPayment.
